Operation Manual
Market Maker Tools
for DEX

Market Maker Tools for DEX - is a program solution allowing market makers to run token movement on the DEX exchanges.

Infinity Rocket Market Maker Tools:

- allows to manage the trading volume,
- allows to accumulate and distribute positions,
- forms support and resistance levels,
- works with a lot of wallets at the same time,
- preset Bot behavior scenarios (Dump Bot, Pump Bot, Volume Bot, Daily Smooth Sell Bot, Daily Smooth Buy Bot),
- allows to form a requested price chart.

INFINITY ROCKET
smart technologies

Infinity Rocket Market Maker Tools

The Program allows to create a large number of trading bots for performing various market maker tasks:
- price holding,
- accumulation, distribution,
- providing necessary price impulse.

When creating a Bot you have to set Gas price, possible price slippage, buying or selling activation, token number and time frame.

One Bot can both buy and sell at a set time frame. Using just one Bot you can determine the price changing balance at a set time frame.

Sub-account management and Administrator list. You can add many employees with access to certain bots.

INFINITY ROCKET
smart technologies

Welcome
to Market Maker Tools
from Infinity Rocket

Create Trading Bots for Market Making: price holding, accumulation, distribution, pump & dump. For DEX Orca, Raydium, Uniswap, PancakeSwap, Sushiswap

Market Maker Tools

Start managing your token on Market Maker Tools

Add **your token** to the platform, then add the wallet for this token.

⚠ Each new token needs to be added to the platform individually to create new bots.
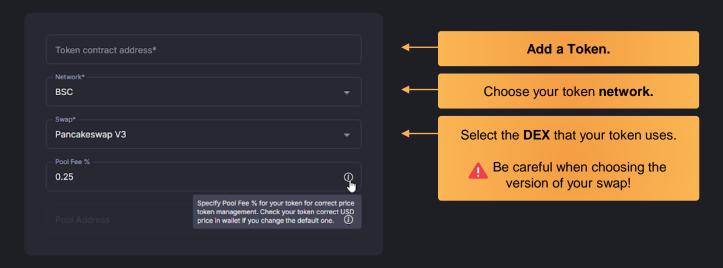

Step 1. Add token

Step 2. Add wallet

1. Firstly, **add a token.**

2. Then **add the wallet** for the token.

⚠️ For set up Pool Fee correctly, just **check your contract**
on https://www.dextools.io

⚠️ If you need to change the Pool Fee % in the future, use the **Options** button near your
token in the DEX menu https://mm.irocket.pro/dex/

And use it on bot settings.

Add new token

Token contract address*

Network*
BSC ▾

Swap*
Pancakeswap V3 ▾

Pool Fee %
0.25   ⓘ

Specify Pool Fee % for your token for correct price token management. Check your token correct USD price in wallet if you change the default one. ⓘ

Pool Address

Add a Token.

Choose your token **network.**

Select the **DEX** that your token uses.

⚠️ Be careful when choosing the version of your swap!

SUBMIT

⚠️ **Attention for Free Trial! 1 trial = 1 token.**
You can use only one free trial on your new account, and there are no changes after adding.
If you need a trial for a new token in the future, contact **Support**
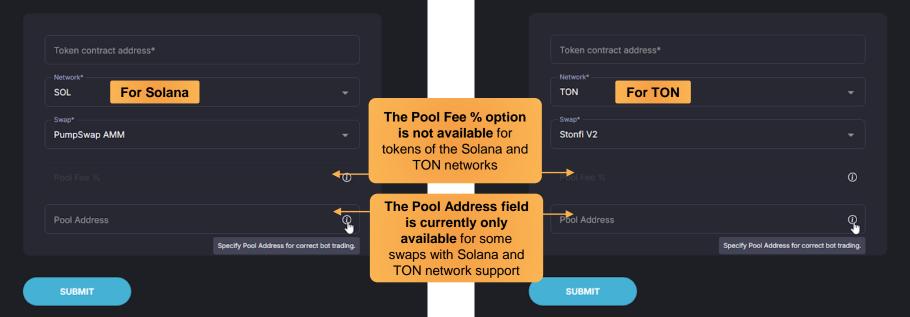

Step 1: In progress...

Step 2: Add wallet

Export Private Key

Create Account

---

1. Open the **wallet list** and choose the wallet you have activated for your token.

2. Open the wallet settings and press **"Export Private Key"**
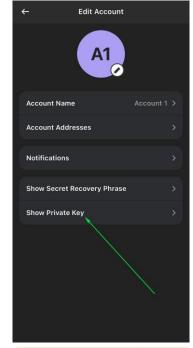

3. Copy the **Private Key** and paste it into the correct field (as shown on the previous page).

Where to find the **Private Key** in **Phantom** & **Solflare** for **Solana**

1. Open the **wallet list**, find the wallet you have activated for your token and tap to the settings button.

2. Export your **Private Key**, copy and paste it into the correct field (as shown earlier on the wallet addition page).
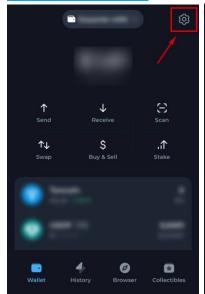

1. Open the **wallet list**, select the wallet you have activated for your token using a long hold.

2. Export your **Private Key**, copy and paste it into the correct field (as shown earlier on the wallet addition page).
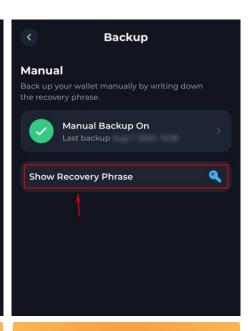

How to find a **Mnemonic** in **Tonkeeper** wallets? ▽ **TON**

Connecting TON wallets requires **a Mnemonic Phrase** instead of a Private Key.

Tonkeeper

1. Select the correct wallet that you want to connect to the system and open it. **Open the Settings** in the upper-right corner.

**2. Click on the Backup button.**

3. Open the Recovery Phrase.

4. Copy and paste it on the wallet addition page on the MM Tools.

⚠ **It's important to copy it and paste without deleting/adding characters or spaces.**

◉ BUSD	1.0 USDT

Balance

🐰 ✓ Spending approved   ↻ Retry

₿ BTCB	111219.870401328 ...

Balance

🐰 ✓ Spending approved   ↻ Retry
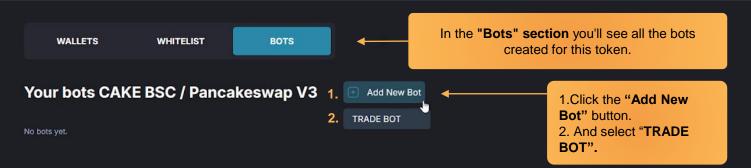

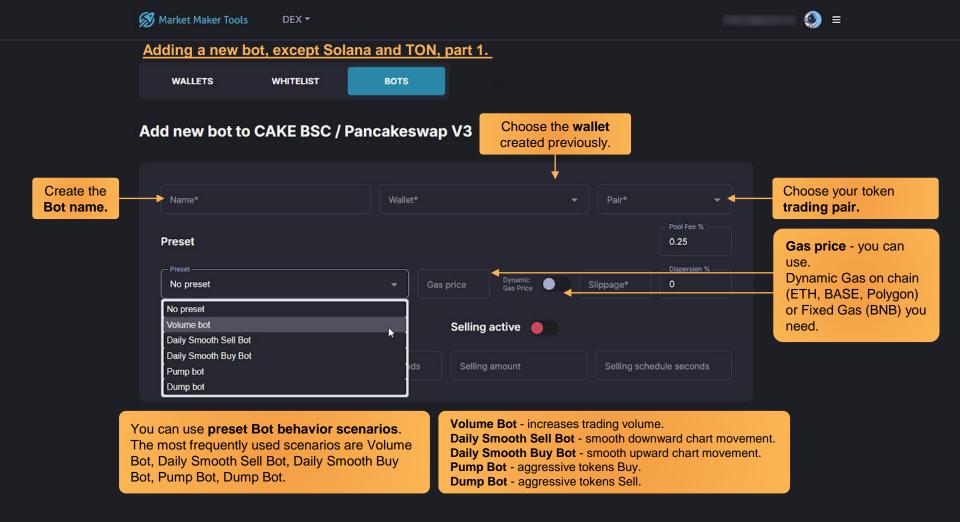

⚠ Attention!
Users often add empty wallets, then replenish them.
Replenish your wallet, and if errors are displayed on this page, click the Retry button near the error.
Bots will not work without Spending approved status.

Sometimes in the Solana and TON wallet balances are not displayed immediately, this is normal and doesn't affect the bot's trading.

Switch on and off the activity with the button.
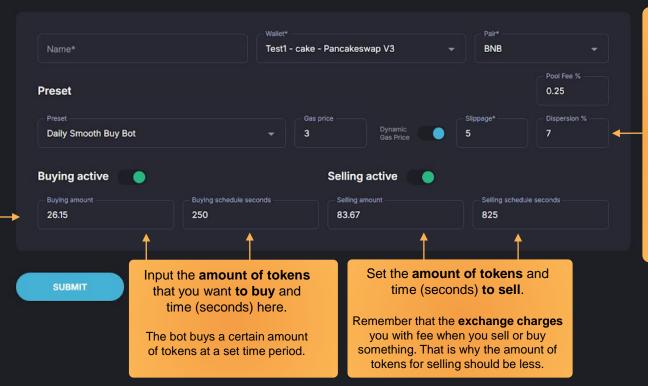

In some cases, the Pool Fee % field is shown. Make sure that the % is the same as in the token settings. **Dispersion** is a random number generator for tokens. For example, if you set 100 tokens and a dispersion of 20%, the bot will buy 100 ± 0-20% of that quantity, which could be 80, 95,120, or 101 etc. The **randomizer** allows you to change the number of tokens of each transaction.

SUBMIT

Input the **amount of tokens** that you want **to buy** and time (seconds) here.

The bot buys a certain amount of tokens at a set time period.

Set the **amount of tokens** and time (seconds) **to sell**.

Remember that the **exchange charges** you with fee when you sell or buy something. That is why the amount of tokens for selling should be less.
